1. Use Case Diagram

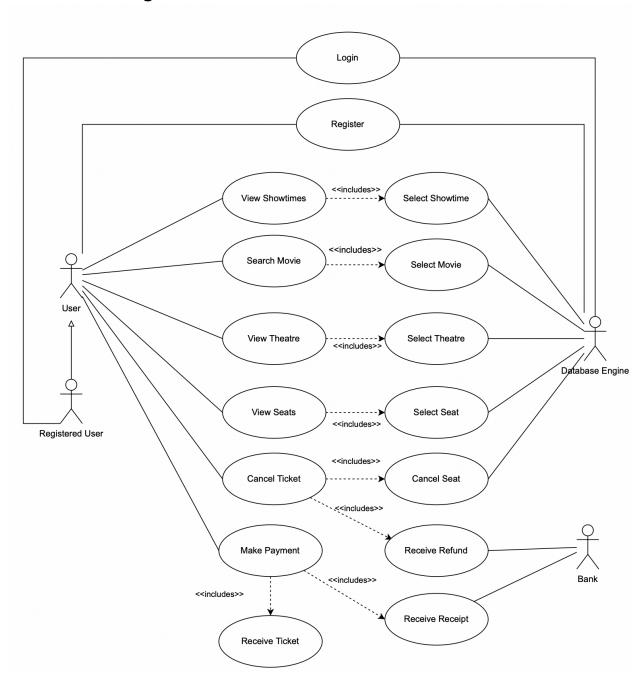

Figure 1: Use-case diagram for ticket king's movie theater app.

2. Use Case Scenarios

Scenario: use case "login registered-user"

This scenario starts on the <u>homepage</u>. The <u>user</u> will click on the <u>login-button</u>. They will be taken to a <u>login-page</u> where they input their registered <u>email</u> and <u>password</u>. If entered correctly, the <u>user</u> will be directed to the <u>homepage</u> as a <u>registered user</u>. If the <u>user</u> is not a <u>registered-user</u>, the <u>user</u> will receive a pop-up error message. They will have to click okay to acknowledge the error, and try to enter their information again, or navigate to the registration page or back to the homepage to continue as a guest user.

Scenario: use case "register"

This scenario starts after the <u>user</u> has navigated to the <u>homepage</u> and wants to become a <u>registered user</u> with Ticket Kings. The <u>user</u> will <u>select</u> on the <u>registration-button</u> in the <u>header</u>. The user will then be taken to a page where they are required to <u>submit</u> in the following information: <u>firstName</u>, <u>emailAddress</u>, <u>homeAddress</u>, <u>password</u>, <u>passwordVerification</u>, <u>creditCardNumber</u>, <u>creditCardExpiry</u>, and <u>CVV</u>. Once the <u>user</u> has entered the information, they will click on the <u>register-button</u>. This <u>creates-an-account</u> for the <u>user</u>, and a confirmation is <u>sent</u> to their <u>email</u>. The newly <u>registered-user</u> will then be directed to the <u>homepage</u> as a logged in <u>registered-user</u> and can <u>search-for-a-movie</u>, <u>view-all-movies</u>, <u>cancel-ticket</u>, <u>view-ticket</u> or <u>log-out</u>.

Scenario: use case "select theater"

This scenario starts after the <u>user</u> has logged-in as a <u>registered-user</u> or continues as a <u>guest-user</u>. The <u>user</u> can then <u>view</u> all the available <u>theaters</u> and <u>select</u> the desired one. Once the <u>user</u> has selected a <u>theater</u>, they will be taken to the <u>homepage</u> for that specific <u>theater</u> where they can then <u>search</u> for a <u>movie</u>, <u>view</u> all <u>movies</u>, <u>cancel</u> a <u>ticket</u>.

Scenario: use case "search movie"

This scenario starts after the <u>user</u> has logged-in as a <u>registered-user</u> or continues as a <u>guest-user</u> and has selected a <u>theater</u>. The <u>user</u> can input the <u>movie-name</u> or any letters belonging in the <u>movie-name</u> and <u>search</u> for it. If the <u>movie</u> is currently playing, the <u>user</u> can then select it, and they will be directed to the <u>individual-movie-page</u> where they can <u>view</u> and <u>select showtime</u> and <u>seat</u>.

Scenario: use case "view all movies"

This scenario starts after the <u>user</u> has logged-in as a <u>registered-user</u> or continues as a <u>guest-user</u> and has selected a <u>theater</u>. The <u>user</u> can <u>select</u> the <u>view-all-movies-button</u> on the <u>homepage</u> to be taken to the <u>movie-page</u> where all the available <u>movies</u> will be listed and <u>displayed</u>. The <u>user</u> can then <u>select</u> a desired <u>movie</u>, which will direct the <u>user</u> to the <u>individual-movie-page</u>, where they can <u>select</u> a <u>showtime</u> and a <u>seat</u>.

Scenario: use case "select movie"

This scenario starts when the <u>user</u> is on the movie page and all available movies are being displayed. The <u>user</u> will then be able to <u>select</u> the <u>movie</u> they want. A detailed, <u>individual movie-page</u> will be <u>displayed</u>, and the <u>user</u> can then <u>view</u> and <u>select</u> a <u>showtime</u> and a <u>seat</u>. Once the <u>showtime</u> and <u>seat</u> are selected, the <u>user</u> can then continue to <u>purchase</u> a <u>ticket</u> by proceeding to the <u>payment-page</u>.

Scenario: use case "select showtimes"

This scenario starts once the <u>user</u> has selected a <u>movie</u>. The <u>user</u> will then be able to <u>view</u> all the <u>showtimes</u> for the selected <u>movie</u> and <u>select</u> one of the <u>showtimes</u>. A graphical representation of the available <u>seats</u> will then be <u>displayed</u>, and the user can <u>select</u> a <u>seat</u>.

Scenario: use case "select seat"

This scenario starts when the <u>user</u> has selected a <u>movie</u> and a corresponding <u>showtime</u>. The <u>user</u> will be able to <u>view</u> all the available <u>seats</u> through a graphical representation, and then can <u>select</u> their desired <u>seat</u>. If a <u>seat</u> is not available, the <u>seat</u> is <u>displayed</u> red. Once the <u>user</u> has selected a <u>seat</u>, then the <u>user</u> can input their <u>credit coupon code</u> and proceed to <u>pay</u> for a <u>ticket</u>. <u>Credit coupon code</u> is not required, only option if the user has one available.

Scenario: use case "make payment"

This scenario starts when the <u>user</u> has selected a <u>showtime</u> and <u>seat</u> for the desired <u>movie</u>. The <u>user</u> will <u>see</u> the <u>price</u> of the <u>ticket</u>, as well as other confirming details. The <u>guest-user</u> will be prompted to <u>enter</u> their <u>payment-information</u> such as <u>name</u>, <u>email</u>, <u>Credit Card Number</u>, <u>CVV</u>, and <u>Expiry Date</u>. If the <u>user</u> is a <u>registered-user</u>, they are not required to enter anything, and the <u>ticket</u> will be confirmed immediately on loading the <u>purchase-page</u>. Once <u>payment-information</u> is entered, the <u>user</u> will <u>receive</u> a <u>ticket</u> and <u>receipt</u> through <u>email</u>. The money for their <u>ticket-purchase</u> will be <u>sent</u> from the <u>bank</u> through their <u>credit</u> card transaction.

Scenario: use case "receive ticket/receipt"

This scenario starts when the <u>user</u> has made a <u>payment</u> for a <u>movie-ticket</u>. The <u>user</u> will <u>receive</u> the <u>ticket</u> as well as the <u>receipt</u> which contains a <u>theater-number</u>, <u>seat-number</u>, <u>movie-time</u>, <u>movie-duration</u>, <u>movie-name</u>, and <u>ticket-price</u> by <u>email</u>. The <u>user</u> will then be directed to the <u>homepage</u> where the <u>user</u> can perform any of the actions on the <u>homepage</u> that has previously been stated in the use-cases above. Specifically, if desired, now that the <u>user</u> has a <u>ticket</u>, they can <u>cancel</u> their <u>ticket</u> by inputting their <u>ticket-code</u>.

Scenario: use case "cancel ticket"

This scenario starts after the <u>user</u> has made a payment, <u>receives</u> the <u>ticket</u> by <u>email</u>, but wants to <u>cancel</u> the <u>ticket</u>. The <u>user</u> will navigate to the Ticket Kings <u>homepage</u>. On the <u>homepage</u> they will be able to <u>enter</u> the <u>cancel</u> <u>ticket-code</u>. If the <u>movie</u> has not yet started, the cancellation request will proceed, and the <u>user</u> will have the money <u>refunded</u> in the form of a Ticket Kings <u>credit</u>, which will be emailed to the <u>user</u>. The <u>user</u> will not receive any refund for a <u>movie</u> that has already started. If the <u>guest user cancels</u> their <u>ticket</u> 72 hours prior to the <u>movie</u>, they will receive a <u>credit-coupon-code</u> with 15% administration fee for future <u>purchase</u> up maximum of one-year <u>expiration date</u>. <u>Registered users</u> do not have to pay 15% admin fee for <u>cancelling</u> their <u>tickets</u>. All <u>coupons</u> and <u>cancelation-confirmations</u> are sent via <u>email</u>.

Note: Admin features that are not included in the use case scenarios.

3. List of Candidate Objects

Noun	Decision
password	filtered(Attribute of registered User)
homepage	candidate object
user	filtered(Generalization of RU and GU)
registered-user	candidate object
guest-user	candidate object
